

POINT OF VIEW — ASSUREAI × DUCK CREEK INTEGRATION

Turning the Intelligent Core into an *Intelligent Edge*.

Duck Creek is the industry's most comprehensive P&C core — **\$150B+ annual premium**, **2,600+ APIs**, **7× Gartner MQ Leader**. It runs insurance operations at scale. **But operations and relationships are different problems.**

This POV proposes a specific integration: **AssureAI as the intelligence and activation layer that sits on top of Duck Creek** — consuming its data, predicting policyholder behavior, and driving personalized engagement across every channel. **Two platforms. One closed loop.**

✦ IN PLAIN ENGLISH

Duck Creek already knows everything about your policyholders. AssureAI **reads that knowledge in real time, predicts who's about to leave, who's about to buy more, and who looks like fraud — then acts on it automatically.** **No new core system. No replatforming.**

Built by Coforge — Duck Creek's Premier SI Partner (Top 3 globally, 1,000+ dedicated consultants, 20-year partnership). We know what's inside these systems. AssureAI is what we built to unlock it.

●EXECUTIVE SUMMARY The 30-second version

01 · THE PROBLEM

Duck Creek runs the operations. **The relationships — retention, cross-sell, fraud — sit unattended** across siloed modules.

02 · THE FIX

AssureAI sits **on top** of DC as the intelligence + activation layer — **five gaps closed**, not a rip-and-replace.

03 · THE PROOF

+1.5-3 pts retention · up to 25% cross-sell lift · fraud flagged in hours, not weeks. **8 weeks** to first measurable model output.

02 · THE TWO HALVES

Duck Creek excels at **processing**. AssureAI excels at *personalizing*.

Think of Duck Creek as **the engine room** — issuing policies, collecting premium, settling claims. Think of AssureAI as **the bridge** — watching the data the engine room produces and steering customer conversations in real time. **The two work together; neither replaces the other.**

 Duck Creek Intelligent Core

 Policy Product config, UW workflows, endorsements, renewals	12K+ forms
 Billing Premium collection, installments, commissions, delinquency	80% CS / 1 screen
 Claims FNOL to settlement, reserves, fraud flags, subrogation	30M+ processed
 Rating Pricing engine, factor tables, bureau content, competitive rates	5-sec quotes
 Clarity Snowflake analytics, curated data layers, 20+ BI reports	AI/ML ready
 Distribution Agent profiles, commission tiers, appointment tracking	Full channel view

+

 AssureAI Intelligence Layer

 Identity Resolution Cross-module golden record with external enrichment	NEW
 Propensity Models Renewal, lapse, cross-sell, fraud scoring trained on DC data	NEW
 GenAI Content Personalized quotes, explainers, renewal offers at scale	NEW
 Omnichannel Engine Email, SMS, push, agent briefs — AI-sequenced	NEW
 Measurement Loop Outcomes fed back into DC Clarity + model retraining	NEW

THE GAP

Duck Creek runs your operations. Nobody's running your *relationships*.

Five specific gaps separate "running insurance" from "growing it." Each row below names a gap, shows what Duck Creek does today, what AssureAI adds — and **why it matters in dollars and customers**.

Policyholder Identity
DUCK CREEK TODAY Clarity unifies data for dashboards. Designed for BI analysts, not real-time activation engines.
+ ASSURE.AI Live identity graph — stitches policy + billing + claims + external data into one golden record, updated in real time.
SO WHAT? You can't personalize what you can't identify. Every downstream decision depends on this.
Predictive Intelligence
DUCK CREEK TODAY New Agentic AI (April 2026) handles underwriting triage and claims intake. No customer-facing propensity models.
+ ASSURE.AI ML models trained on your DC history: who's about to lapse, who'll buy a rider, which claim looks fraudulent.
SO WHAT? AI-scored leads convert 3.4× faster than manual outreach. (InsuredMine)
Personalized Content
DUCK CREEK TODAY Template-based communications. No GenAI, no dynamic content, no variant testing.
+ ASSURE.AI GenAI generates personalized renewal offers, quote pages, rider explainers — each tailored to the individual.
SO WHAT? 72% of policyholders would consider add-ons if asked. Only 19% are being asked. (J.D. Power 2025)
Omnichannel Activation
DUCK CREEK TODAY Duck Creek Anywhere handles policy self-service. Transactional, not proactive outreach.
+ ASSURE.AI Orchestrated campaigns: email → SMS → push → agent call — timed and sequenced by AI based on response signals.
SO WHAT? Right message. Right channel. Right moment. Not a generic renewal notice 30 days out.
Closed-Loop Learning
DUCK CREEK TODAY Clarity provides retrospective BI. 20+ Power BI dashboards. Batch-oriented.
+ ASSURE.AI Every touchpoint measured. Every outcome fed back into models. Every campaign smarter than the last.
SO WHAT? This is how you get compound returns — the system improves itself over time.
★ On Duck Creek's Agentic AI (April 2026): DC launched a powerful agentic platform for operational AI — underwriting triage and claims intake. It's impressive. But it focuses on internal efficiency, not policyholder-facing personalization. These are complementary investments, not competing ones. Source: Duck Creek Agentic AI Platform launch, PRNewswire, April 28, 2026

How they *actually connect*.

Closing those five gaps doesn't need middleware or black boxes. **Two channels do it** — Duck Creek's APIs for real-time events (a payment missed, a claim filed) and Clarity Snowflake for historical data (years of policy and claims history that ML models learn from). A feedback loop sends every outcome back into Duck Creek, so **the next decision is smarter than the last.**

✦ **WHAT IT MEANS**

Nothing inside Duck Creek changes. AssureAI plugs in through doors that already exist. The integration uses standard interfaces — **the kind your team already maintains.**

FROMTOMETHOD**DATA**

DC Policy APIs	Data Ingestion Agent	REST	Policy lifecycle, coverages, renewal dates
DC Billing APIs	Data Ingestion Agent	REST	Payment history, delinquency, installments
DC Claims APIs	Data Ingestion Agent	REST	FNOL, reserves, adjuster notes, settlements
DC Rating APIs	Personalization Agent	REST	Live pricing for dynamic quotes and offers
DC Distribution APIs	Omnichannel Agent	REST	Agent profiles for call routing and briefings
DC Clarity (Snowflake)	Propensity Modeling Agents	SQL	2+ years historical data for ML training
Measurement Agent	DC Clarity (Snowflake)	Write-back	Personalization outcomes, engagement metrics

No new core systems. No replatforming. Six DC integration points feeding intelligence in. One write-back closing the loop.
REST = real-time API call · SQL = batch query of historical data · Write-back = AssureAI sends results back to Duck Creek.

What *changes* when the loop closes.

Five everyday operational areas. Each row shows life today (DC alone), life tomorrow (DC + AssureAI), and **the measurable upside** — sourced from Bain, Lorikeet, Allianz, and others.

Renewal Process
BEFORE Generic notice mailed 30 days out. No risk segmentation. Agent not alerted.
AFTER AI scores lapse risk 45 days out. Personalized offer deployed across email→SMS→agent. Agent gets full context briefing.
+1.5-3 pts retention Lorikeet CX
Cross-Sell
BEFORE Annual review catches some gaps. Agent-dependent. 3-5% untargeted attach.
AFTER Life events + coverage gaps detected automatically. Personalized quote with DC Rating pricing. 10-15% targeted attach.
Up to +25% revenue Bain & Company
Fraud Detection
BEFORE Rule-based screening catches obvious patterns. Multi-system signals not correlated. 5-14 days to SIU.
AFTER AI cross-correlates Claims + Policy + Billing + Distribution in hours. Entity resolution finds linked ownership.
Days → Hours Allianz Project Nemo
Content Creation
BEFORE Template-based comms. Manual production. One-size-fits-all messaging.
AFTER GenAI generates personalized renewal emails, rider explainers, claim updates. Variant testing built in.
40-60% faster ops GenAI benchmarks
Channel Strategy
BEFORE DC Anywhere handles transactional self-service. No proactive outreach orchestration.
AFTER AI decides channel, timing, frequency based on policyholder signals. Sequences adapt in real time.
100% channel coverage AssureAI capability

Three policyholders. *Real data. Real math.*

Each story shows the same pattern: **signals already exist inside Duck Creek but sit in different silos.** AssureAI connects them, predicts what's about to happen, and acts before the moment passes. **The numbers are sourced.**

RETENTION

+18 pts

renewal probability

She's about to leave. You have 14 days.

Sarah M. — Auto + Home, 7-year customer, \$42K lifetime value

Sarah missed a premium payment. She browsed a competitor's quote site. Her last claim was denied. None of these signals, on their own, triggers an alert in Duck Creek. Together, they spell a 73% lapse probability.

🔗 AVAILABLE IN DUCK CREEK

- ✓ Billing: missed installment (first time in 7 years)
- ✓ Claims: denied roof claim 45 days ago
- ✓ Policy: bundle renewal in 30 days
- ✓ Distribution: agent hasn't called in 90+ days

⊕ EXTERNAL DATA NEEDED

Web analytics: visited competitor comparison site
Credit: score stable — this isn't financial distress

PROJECTED OUTCOME

BEFORE AFTER

72% → ~90%

Every 1 pt of retention on 100K policies = \$2M saved. Industry benchmark: 1.5–2 pts portfolio lift in 6 months.

Source: Lorikeet CX, PropertyCasualty360

GROWTH

+33–47%

annual premium

He just bought a house. His policy doesn't know.

James C. — Term Life, 3-year customer, \$1,800/yr premium

James closed on a home three weeks ago. His Term Life policy has no mortgage protection rider, no critical illness coverage. Duck Creek has his policy. Public records have his home purchase. Nobody's connecting the dots.

🔗 AVAILABLE IN DUCK CREEK

- ✓ Policy: Term Life, \$500K, no riders
- ✓ Billing: auto-pay, zero delinquency
- ✓ Claims: clean history
- ✓ Rating: rider pricing exists but was never surfaced

⊕ EXTERNAL DATA NEEDED

Public records: home purchase 3 weeks ago (~\$0.10–0.50/lookup)
Web: browsing life insurance FAQs on your site

PROJECTED OUTCOME

BEFORE AFTER

\$1,800 → \$2,400–2,640

AI can increase cross-sell revenue by up to 25%. Targeted attach rates: 10–15% vs. 3–5% untargeted.

Source: Bain & Company, InsuredMine, Reagan Consulting

The fraud is hiding in plain sight — across four systems.

Policy #HC-7742 — Commercial Property, \$280K reserve

A \$280K fire claim. Coverage was increased 40% two months before. Payment pattern changed from annual to monthly. The binding agency is brand new. Each signal lives in a different Duck Creek module. No human is connecting them fast enough.

🔗 AVAILABLE IN DUCK CREEK

- ✓ Claims: \$280K reserve, fire, 48hrs post-incident
- ✓ Policy: coverage increased 40% at 60 days prior
- ✓ Billing: payment pattern change 3 months ago
- ✓ Distribution: agency with <12 months track record

⊕ EXTERNAL DATA NEEDED

Entity graph: beneficial owner linked to 3 policies (requires cross-referencing)

PROJECTED OUTCOME

BEFORE AFTER
5-14 days → <24 hours

Predictive analytics: 23% more fraud detected, 12% claim cost savings. (Appinventiv research)

Source: Allianz Project Nemo, Coalition Against Insurance Fraud

07 • WHY COFORGE

We didn't study Duck Creek. We built it for carriers.

This integration works because **Coforge built both ends**. We're Duck Creek's Premier SI Partner — we've configured these APIs, migrated this data, and optimized these workflows for **20 years**. And we built AssureAI specifically to fill the gap we've seen across every implementation.

20 years

partnering with Duck Creek

1,000+

dedicated DC consultants

Top 3

global DC implementation partner

2×

Standard of Excellence Award winner

Let's prove the integration works — on *your data*.

Connect to DC Policy + Billing via Clarity Snowflake. Train one propensity model. Measure real lift on a 5,000-policyholder pilot. **8 weeks to first model output.**
